TYPOLOGY OF PARTNERSHIPS IN THE EUROPEAN RESEARCH AND INNOVATION SYSTEM

ABSTRACT

The 'Typology of Partnerships in the European Research and Innovation System' project has developed a set of 7 different types of research and innovation partnerships. These partnerships are differentiated by innovation generations, clusters and governance structures. Key features of the types such as contexts, strategies, implementation procedures and policy environments are described

These types of research and innovation partnerships are related to fitting policy schemes and respective contexts, ends and means of policies. Trends of innovation partnerships and policies as well as added value of public policies are identified. Finally the identification of policy choices are presented and recommendations for increasing competitiveness of enterprises, industries, technologies and regions are made.

The analytical background of the project is based on considerations following new growth theory and previous innovation research. The empirical bases of the project are 60 interviews with policy experts and 116 interviews with enterprises engaged in research and innovation partnerships. Additional case studies of „best practise“, instruments, regions and context conditions such as intellectual property rights supplement and support the evidence from the interviews.

TYPOLOGY OF PARTNERSHIPS IN THE EUROPEAN RESEARCH AND INNOVATION SYSTEM

ACKNOWLEDGEMENTS

This report was produced in behalf of DG XII of the Commission of the European Union. It has been produced between March 1995 and June 1996. Many people have contributed considerably to the results of the report. Most of all I gratefully acknowledge the advice of Mr. J. Removille who has been in charge of the study on the side of the Commission. His expertise, reviews, critique and co-operation have been above and beyond usual professional commitment and support. Mr. J.P. Chevillot has always contributed valuable advice throughout the study. In addition Commissions services have discussed the research design, two interim reports and a draft final version providing additional input. My gratitude is expressed to J. Searle, P. Caracostas, W. Wobbe, and all those who have commented the diverse interim reports.

The research would not have been possible without 60 policy experts on European and Member State level as well as our interview partners in 112 enterprises. All of them took a lot of time and patience to discuss the concepts used in this study and to contribute the information the study is based on.

A research project of this size can only be performed with a well functioning team of researchers. The fieldwork has - as in previous studies - been supported by Maria Petmesidou and Lefteris Tsoulouvis in Greece, Peter Plougman and Finn Tideman (DTI) in Denmark and Volker Telljohann (IRES) in Italy, Volker Belzer and Jürgen Nordhause-Janz (both IAT) in Germany. The cluster analysis of the interview data on which the typology is based, would not have been possible without the support and commitment of Andreas Born (IAT). Valuable contributions have also been made by a team of international experts invited by the Commission that has especially discussed the concept of the study as well as the first stage research results. I am specially grateful to Lynn Mythelka (FORUM CEREM) who has provided the differentiation of different innovation strategies. P. Holmes (SEI) and M.Y. Doz (INSEAD) have supported the design of the research considerably.

The core team members of the project have been John P. Watson (TEP), Juan F. Tellechea and Miguel A. Suarez (SOCINTEC), Paul Kalff (TNO) and Stephan v. Bandemer (IAT). The co-operation of this team has been extremely efficient and uncomplicated as it has been in previous studies. The final responsibility for the management of the project and the results is taken by Stephan v. Bandemer for the side of the prime contractor.

TYPOLOGY OF PARTNERSHIPS IN THE EUROPEAN RESEARCH AND INNOVATION SYSTEM

CONTENTS	PAGE
0. SUMMARY	4
1. PURPOSE AND STRUCTURE OF THE REPORT.....	9
1.1 The Focus on Competitiveness	9
1.2 The Structure of the Report.....	10
2. THE PROPOSED TYPOLOGY AND ITS POLICY IMPLICATIONS	13
2.1 Types of Research and Innovation Partnerships and Policies	17
2.1.1 Technology Push-Transfer Type of Partnerships (ESPRIT/BRITE-EURAM)	17
2.1.2 Technology Push Collective Type of Partnerships (Dutch Collectivity Programme) .	22
2.1.3 Market Pull-RTO Type of Partnership (CRAFT)	27
2.1.4 Market Pull Collaborative Type of Partnership (EUREKA)	31
2.1.5 Mutual-Complementarity-of Technology Push and Market Pull Collective Type of Partnerships (AIF/CTI).....	34
2.1.6 The Integrated Networking Type of Partnership (Scandinavian Networking Schemes)	37
2.1.7 The Integrated Vertical Type of Research and Innovation Partnership (production chain)	42
2.2 Types of Research and Innovation Partnerships in an Integrated Policy Scheme .	44
3. THE RESEARCH METHODOLOGY	47
4. THE ANALYTICAL FRAMEWORK.....	51
4.1 New Growth Theory as the Analytical Umbrella.....	52
4.2 The Innovation Framework: Strategies of Innovation Partnerships.....	53
4.3 Application Strategies: The Importance of Clusters.....	54
4.4 Organising Principles: Governance structures of Innovation Partnerships	56
4.5 A Basic Model of Research and Innovation Partnerships.....	57
4.6 Followers or Leaders?.....	58
4.7 Added Value of Public Policies	59

5. THE VIEW OF POLICY MAKERS: RESEARCH AND INNOVATION PARTNERSHIP POLICIES	61
5.1 Research and Innovation Partnerships in EU Member-States	62
5.1.1 The Public Policy Environment for Research an Innovation in EU Member States...	64
5.1.1.1 The Innovation Policy System of EU Member States.....	64
5.1.1.2 The Innovation Policy Instruments in EU Member States	67
5.1.1.3 The Innovation Policy Packaging in EU Member States.....	69
5.1.1.4 The Public Policy Environment of Research and Innovation Partnerships in EU Member States: Trends and Challenges	71
5.1.2 The Research and Innovation Partnership Landscape in EU Member States	73
5.1.2.1 The Research and Innovation Partnership Models.....	74
5.1.2.2 The Research and Innovation Partnership Structures	76
5.1.2.3 The Research and Innovation Partnership Clusters.....	78
5.1.2.4 The Landscape of Research and Innovation Partnerships: Reasons for Success and Failure	80
5.2 Research and Innovation Partnerships: EU Level	82
5.2.1 Added value at European level: the Member States perspective.....	82
5.2.2 The partnership building contribution of EU level initiatives	83
5.2.3 Differentiation of the EU level programmes.....	86
5.2.4 Positioning EU level programmes in the public policy 'space'.....	86
5.3 Summary of Research and Innovation Partnership Policies and Landscape	92
6. THE VIEW OF ENTERPRISES	93
6.1 Methodological Considerations.....	93
6.2 Characteristics of the Field Work.....	95
6.2.1 Overview of the fieldwork process and selection criteria	95
6.2.2 Sample distribution	100
6.3 Questionnaire overview	103
6.4 Sample results.....	105
6.4.1 Objectives: Why a partnership?	106
6.4.2 Clusters: With whom?	109
6.4.3 Purpose: What for?	111
6.4.4 Implementation issues: And how?	112
6.5 Power Relations and Intellectual Property Rights.....	116
6.5.1 Power Relations and Interdependence	116
6.5.2 Intellectual Property Rights	118

7. THE CHOICE OF A TYPOLOGY	120
7.1 The Identification of Variables	121
7.2 The Proposed Typology	135
7.2.1 The Technology Push Transfer Type of Partnership.....	136
7.2.2 The Technology Push Collective Type of Partnership.....	137
7.2.3 The Market Pull Co-operative Type of Partnership	137
7.2.4 The Market Pull Collaborative Type of Partnership.....	138
7.2.5 The Mutual Complementarity Type of Partnership.....	139
7.2.6 The Integrated Networking Type of Partnership.....	140
7.2.7 The Integrated Vertical Type of Partnership	141
 8. KEY FEATURES OF THE TYPOLOGY.....	 143
8.1 The Context of Research and Innovation Partnerships	143
8.2 Strategies of Research and Innovation Partnerships	148
8.3 Implementation Procedures of Research and Innovation Partnerships	154
8.4 The Public Policy Environment.....	156
 9. CONCLUSIONS AND POLICY RECOMMENDATIONS.....	 159
9.1 Trends in Innovation Partnerships and Policies.....	159
9.2 Added Value of Public Policies	162
9.3 Added Value of EU-Policies	163
9.4 Policy Choices and Recommendations.....	164

SUMMARY

Typology of Partnerships in the European Research and Innovation System

0. SUMMARY

1. Research and Innovation Partnerships are an important way of organising collective learning. By creating synergies and supporting the use of mutual complementarity they contribute considerably to the competitiveness of enterprises, industries, technologies and regions. However, the cost of creating research and innovation partnerships inhibits their creation to some extent. Public policy in general, and EU policies in particular, can therefore produce a high degree of added value by supporting the generation, organisation and development of research and innovation partnerships in Europe.
2. Based on economic and innovation theory and the empirical evidence gathered through interviews with 60 experts and 116 enterprises this study has developed a typology of partnerships and associated each type to appropriate policy instruments and schemes. Each type is analysed in terms of typical contexts, strategies and implementation procedures and its relevance to policy in terms of ends and means.
3. The **typology of partnerships** has been developed by identifying and analysing three dimensions of partnerships and these have been drawn on to differentiate seven different types. The three dimensions are as follows:
 - Innovation strategies, ranging from technology push through market pull to integrated networking;
 - Innovation clusters, describing criteria of dependencies of enterprises, such as regional, sectoral, technological contexts;
 - organising principles, describing the governance structures of research and innovation partnerships.

The seven types identified on the basis of this differentiation are described below. Policy programmes which illustrate these types are mentioned in brackets, although it must be noted that the matching is only an approximate one.

- **The Technology Push/Transfer Type of Partnership (BRITE/ESPRIT Type)**

This type is characterised by technology push strategies. Such enterprises have a high research intensity and are co-operating in horizontal and lateral fields. Between the enterprises in partnerships, technology transfer is the dominating organising
