

Bio-Montan-Park North-Rhine-Westfalia

Prof. Dr. Franz Lehner &
Dr. Alexa Lutzenberger

The Project:

The idea:

An alliance of biomass production for energy use, landscape architecture, landscape arts, revaluing of waste- and uncultivated land, urban development, resource- and energy efficient architecture of living and working areas.

A reaction:

Climate change, energy transition and scarcity of resource's

The approach:

Developing axis for a sustainable urban development under consideration of ecological, economical and social aspects.

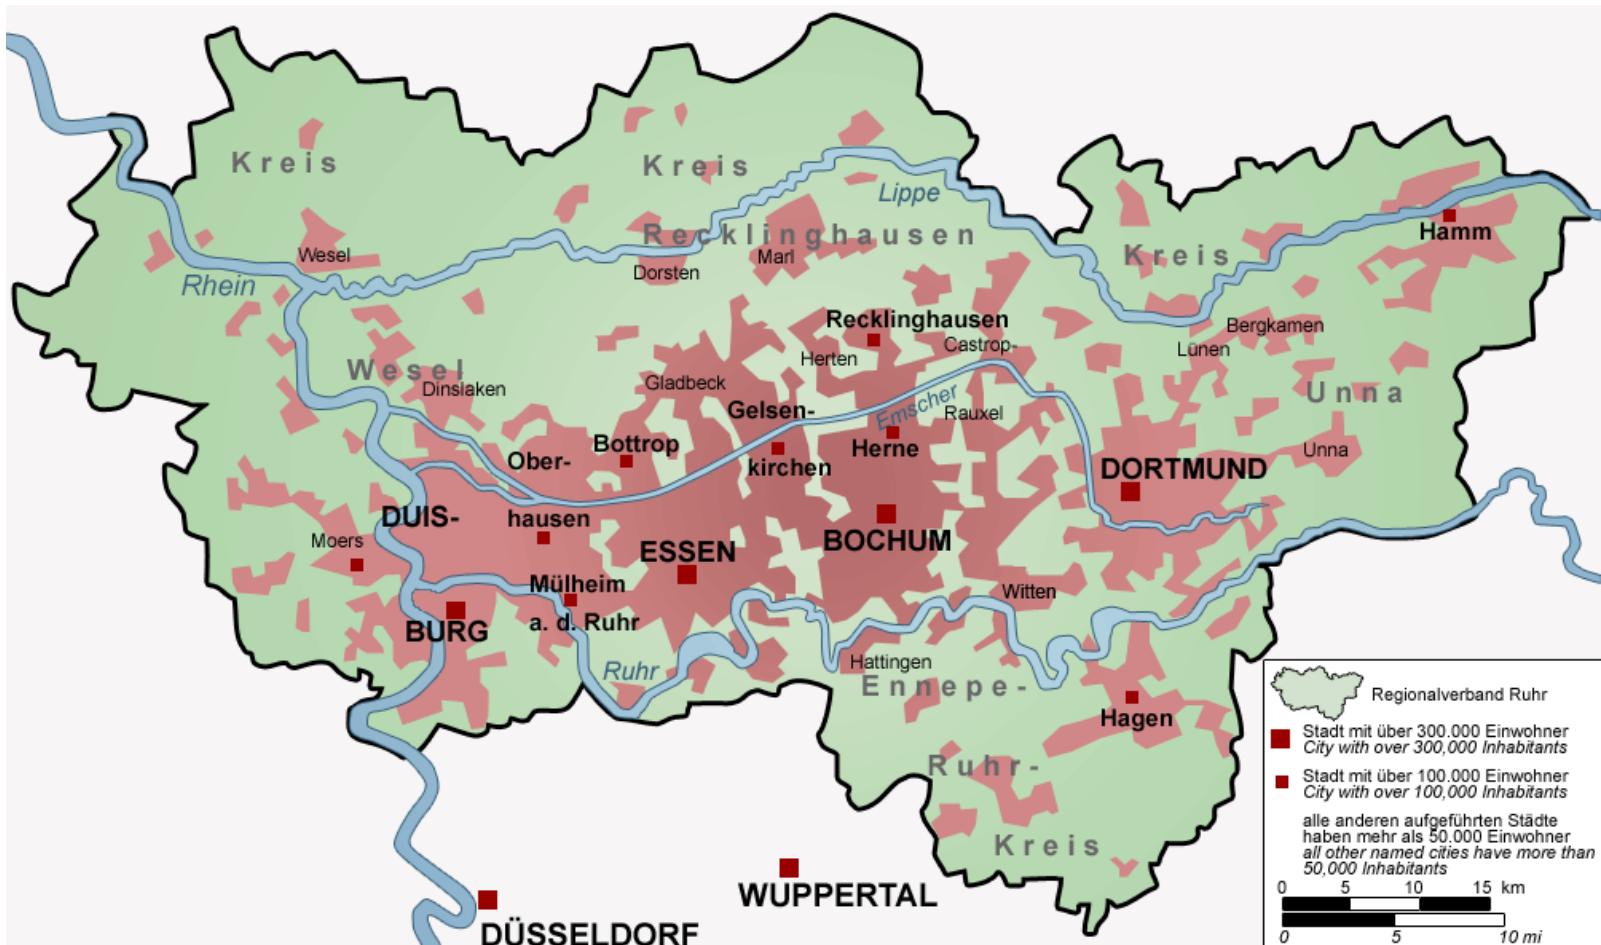

The Concept:

Integrative urban development for realising sustainable development and communal planning

The Biomass:

This Figure shows a part of the Project New Gardens of Schloss Dyck using Miscanthus as an landscape architectural element, (<http://www.stiftung-schloss-dyck.de>) planed and realised by Stephan Lenzen, RMP Landschaftsarchitekten (<http://www.rmp-landschaftsarchitekten.de>).

CULTNATURE

The Solution:

© KLA Kiparlandschaftsarchitekten milano | duisburg

This Figure shows a design as an example of a biomass-park which adds typical elements of park-landscapes with a production of energy-crops and the social approach of recreation areas. This design was made for CULTNATURE by KLA – Kiparlandschaftsarchitekten.

The Solution:

- Transformation of uncultivated and waste land from old mining and industries in Biomass-Park areas
 - ⇒ Development axis in sustainable cities and regions.
 - ⇒ Biomass-Park areas are modern types of parks which are combinations of an agricultural- and forestry use with a high approach of landscape architecture and landscape arts.
 - ⇒ Attractive Places for recreation, living and working.
- Stakeholder dialogue with politician's, economist's and an interdisciplinary scientific side.
- Individual planning for every single area considering the neighbourhood, the degraded state of the areas, using opportunities and landscape architecture.
- The upvaluation of neighbourhoods makes these areas more attractive for living, business and trade.
- Recreation areas are bringing a higher quality of live in cities and regions.
- Biomass parks and the Renewable Energy Plants are creating jobs.

Thank you!

Dr. Alexa Lutzenberger
